

AI-FMS Application Video Script

4:15–4:30 master · Ronnie-led narration · 3-minute and 60-second cutdowns

Source: docs/demo_walkthrough_script_ai_fms_v1_5.md Generated: 2026-08-22 Use: On-set reference and print review

状态：CURRENT – full application-film structure
版本：v2.0
更新日期：2026-08-17
文件名为兼容早期链接而保留。v2.0 在已认可的系统与研究主体前后增加申请人出镜、FMS 背景、Level 1/Level 2 certification、实践动机、个人反思和大学阶段的后续方向。
逐镜头素材来源、拍摄参数、人员分工和交付要求见：`docs/delivery/ai_fms_application_video_asset_and_shot_plan_2026-08-17.md`。

1. 视频定位

这不是单纯的 software demo。它同时承担两项任务：

- 1. **展示项目**：AI-FMS 的问题、功能、研究方法、发现和边界。
- 2. **展示申请人**：Ronnie 的专业准备、表达能力、研究动机、实际角色、反思和未来方向。

因此正式视频应满足：

- Ronnie 全程担任 narrator；
- 开头和结尾必须本人正面出镜；
- 中间从 FMS 实践转入 AI-FMS 时，建议再短暂出镜一次；
- screen recording、证书、FMS 实践和研究图只作为支撑 Ronnie 叙事的 B-roll；
- 不把视频录成逐个按钮教学，也不按论文目录朗读。

2. 推荐长度与版本

版本	时长	用途
Master application film	4:15–4:30	Portfolio、supplementary link、老师和面试前浏览
Condensed application cut	2:50–3:05	有较严格时长限制的提交场景
Short teaser	0:55–1:00	项目页、快速介绍、面试开场

Master 版是主版本。三分钟版从 Master 压缩，不另写一套不同故事。

3. 故事结构

- 1. **Who I am**：Ronnie、游泳经历与动作质量兴趣。
- 2. **What FMS is**：七个 fundamental movement patterns、0–3 ordinal score、screen 而不是 diagnosis。
- 3. **Why I was prepared**：完成 FMS Level 1 和 Level 2 training/certification。
- 4. **What I observed in practice**：实际评估中发现回放、远程审核、定量观察和信息压缩问题。
- 5. **What I built and studied**：AI-FMS 七动作系统与四动作 Phase I 评估。
- 6. **What I learned**：human oversight、data quality、abstention、research responsibility。
- 7. **Where I want to go**：大学阶段继续探索 Human Movement Science、biomechanics 和 responsible AI。

4. 录制素材

A-roll: Ronnie 出镜

- 开场 medium close-up, 约 18 秒。
- 实践问题转入项目时的短镜头, 约 6–8 秒, 可与 FMS 场地同景。
- 结尾 medium close-up, 约 40 秒。

B-roll

- 七个 FMS 动作的快速蒙太奇或简洁名称列表。
- Ronnie 的 FMS Level 1 和 Level 2 certificates。
- Ronnie 实际设置 FMS kit、说明动作或进行评估的片段。
- AI-FMS Workbench 真实视频与 pose overlay。
- Study Mode dry-run 匿名盲评界面。
- Phase I 核心数字卡和四张 movement-specific figures。
- 简洁 end card: 项目名、Ronnie 姓名和最终有效链接。

权利与隐私

- 证书画面只显示经批准的姓名、课程名称、级别和日期; 遮挡 certificate number、QR code、email、住址或不必要的 identifier。
- 屏幕上的认证名称按证书原文展示, 不自行改写 title。
- FMS 实践和动作视频只使用取得展示同意的素材。
- 不显示真实 participant 信息、private reviewer comments、本地路径、通知或文件名分数提示。

5. Master Script: 约 4 分 25 秒

0:00–0:18 | 本人出镜：个人起点

画面：Ronnie 正面出镜。背景简洁，最好能自然看见 FMS kit 或运动环境，但不要堆满道具。

English narration：

Hi, I'm Ronnie. Years of swimming taught me to notice how small differences in movement can affect control, efficiency, and performance. That curiosity led me to study the Functional Movement Screen, and eventually to build AI-FMS.

表达重点：直接看镜头，不先放 logo，不用宏大口号；第一句先建立“人”。

0:18–0:42 | FMS 是什么

画面：Ronnie 继续出镜 2–3 秒，然后切七动作 B-roll。屏幕可依次显示：Deep Squat、Hurdle Step、In-Line Lunge、Shoulder Mobility、ASLR、Trunk Stability Push-Up、Rotary Stability。

English narration：

FMS stands for Functional Movement Screen. It is a standardized screening system that uses seven fundamental movement patterns to observe how mobility, stability, symmetry, and motor control work together. Each pattern is scored from zero to three. It is a movement screen, not a medical diagnosis.

内容边界：不要在这里讨论 injury prediction，也不要把 FMS 说成疾病诊断或完整体能测试。

0:42–1:02 | 培训与 Level 1 / Level 2 Certification

画面：Ronnie 出镜一句后，分别展示 Level 1 和 Level 2 certificate。每张至少停留 2.5–3 秒，让观众能看清姓名和级别；可叠加简洁 lower third。

English narration：

Before evaluating other people, I wanted to understand the protocol responsibly. I completed FMS Level 1 and Level 2 training and earned both certifications. The training gave me a structured foundation for setting up the seven screens, applying the scoring rules, and recognizing when a result requires further human attention.

表达边界：认证说明 Ronnie 受过相关训练，不自动等于 clinician、medical expert 或 research validation。

1:02–1:30 | 实践中发现问题，并转入 AI-FMS

画面：FMS kit 设置、Ronnie 说明动作、观察或记录评分；最后 6–8 秒回到 Ronnie 出镜，讲出转折句。

English narration：

After the training, I began conducting and reviewing FMS assessments. I saw four practical limitations. Movements pass quickly; remote review makes repetitions slow to find; visual judgment remains qualitative even when angles and trajectories matter; and the zero-to-three score preserves little of the evidence behind the decision. Those problems became the starting point for AI-FMS.

转场：最后一句由 Ronnie 对镜头说完，然后切入完整 Workbench。

1:30–1:50 | 七动作系统范围

画面：AI-FMS Workbench 全景；展开 action selector，快速扫过七个动作。

English narration：

AI-FMS is an explainable, human-in-the-loop video-review system. The workbench supports all seven FMS movements, with repetition-level review and a movement-specific, pose-based first-pass suggestion. The AI can explain its evidence and abstain when video quality or protocol information is incomplete.

1:50–2:18 | 真实视频、rep 与 pose evidence

画面：播放一小段 Deep Squat，暂停在最低位；打开真实 skeleton；点击相邻 reps；展示 loop playback 和 segment timing。

English narration：

A reviewer can isolate complete repetitions, replay a difficult moment, and correct the timing instead of searching through the full video again. The MediaPipe overlay is aligned to the video, allowing the system to preserve angles, normalized distances, trajectories, and movement events that are hard to record consistently by eye.

2:18–2:42 | AI evidence 与人工最终判断

画面：feature panel、AI suggestion、protocol condition 和 reviewer form。鼠标只做一到两个有意义的动作，不快速点击。

English narration：

The AI suggestion supports, rather than replaces, reviewer judgment. It shows which criteria support a score, what remains uncertain, and whether protocol information is missing. The reviewer records the final score, confidence, camera view, side, clearing information, and notes.

2:42–3:02 | Study Mode 与盲评边界

画面：切到 Study Mode dry-run，显示匿名队列、动作视频和 RAW SCORE controls。

English narration：

To evaluate the system without leaking AI information, we built a separate Study Mode. In both blinded rounds, reviewers could not see AI scores, pose parameters, source file names, previous answers, or the other reviewer's decisions. Reviews were stored as append-only events and exported with checksums.

3:02–3:28 | Phase I 评估

画面：简洁 results card。突出 110 reps、32 blind-reviewed、26/26 human exact、16/25 AI exact、23/25 within one，不要滚动整篇论文。

English narration：

Phase I reconstructed 110 repetitions from 28 source videos and selected 32 across four movements for two blinded rounds. In Round B, the reviewers agreed on scoreability for all 32 items and assigned the same score to all 26 jointly scorable items. The locked AI exactly matched human consensus on 16 of 25 comparable items and was within one point on 23. This is an internal benchmark, not held-out clinical validation.

3:28–3:50 | 系统带来的科研发现

画面：四张 research figures 依次显示，每张约 5 秒。

English narration：

The quantitative evidence also revealed what the ordinal score does not show. Deep Squat formed a strategy continuum; ASLR preserved side and repeatability differences; Hurdle Step showed several pathways to the same score; and Rotary Stability required a full-cycle view of coordination and event sequence.

3:50–4:28 | 本人出镜：角色、反思与未来

画面：回到 Ronnie 正面出镜。结尾 3–4 秒淡入简洁 end card。

English narration：

My role in this project grew far beyond demonstrating a piece of software. I learned the FMS protocol, completed the blinded reviews, helped shape the study design, and interpreted both the useful evidence and the system's failures. I worked through an AI-assisted development process, but the project taught me that responsible technology depends on human judgment, data quality, and the willingness to say when the evidence is not enough.

In college, I hope to continue exploring Human Movement Science, biomechanics, and responsible AI. I would like to test AI-FMS on new held-out videos, involve more trained reviewers, and study whether these quantitative movement profiles can guide better follow-up assessment without turning a screen into a diagnosis. For me, AI-FMS is not the end of a project. It is the beginning of a research direction I want to keep pursuing.

最后画面：

- AI-FMS
- Ronnie [正式英文姓名]
- Human Movement Science · Responsible AI · Movement Evidence
- 最终有效的 project page / GitHub link；链接未完成时不要显示 placeholder。

6. 三分钟压缩版

当提交平台严格限制在约三分钟时，保留完整人物弧线，不要只删掉开头和结尾：

时间	内容
0:00–0:15	Ronnie 出镜：游泳、动作兴趣与 AI-FMS
0:15–0:33	FMS 七动作、0–3 分和 screen 边界
0:33–0:48	Level 1 / Level 2 certificate
0:48–1:02	实践中发现问题并转入系统
1:02–1:42	Workbench、pose、AI evidence 与 human decision
1:42–2:00	Study Mode blind-review design
2:00–2:25	Phase I 数字与四种 findings
2:25–3:00	Ronnie 出镜：角色、学习和大学后续方向

压缩时优先减少按钮操作、技术名词和单张 figure 停留时间，不删除认证、个人角色、研究 边界或未来方向。

7. 60 秒 Short Teaser

0:00–0:10 | Ronnie 出镜

I'm Ronnie. My experience in swimming and my FMS Level 1 and Level 2 training led me to ask how movement screening could become easier to review and more quantitative.

0:10–0:30 | Workbench

I helped develop AI-FMS, a seven-movement video-review system combining repetition timing, MediaPipe pose evidence, interpretable AI suggestions, human scoring, and traceable export.

0:30–0:45 | Study and findings

A two-round blinded study used 32 repetitions, while quantitative analyses showed different movement strategies hidden within the same score.

0:45–1:00 | Ronnie 出镜

The project taught me that responsible sports technology requires human judgment, honest limits, and evidence that can be checked. That is the research direction I hope to continue in college.

8. Presentation 设计

出镜

- 镜头与眼睛同高，medium close-up，构图留出少量字幕空间。
- 使用稳定主光和清晰收音；音质优先于复杂运镜。
- 背景简洁、有真实运动或 FMS 语境，但不要做成道具陈列。
- 开头语速略慢，结尾直视镜头；避免明显逐字读 teleprompter。
- 中段可以使用画外音，但全部 narration 必须由 Ronnie 本人录制。

剪辑

- A-roll 切 B-roll 时保留 Ronnie 的声音连续性。
- 证书、FMS 实践、系统界面和 research figures 都应服务于正在说的句子。
- 不使用过度动画、快速 zoom、模板化转场或持续背景音乐压过人声。
- 建议 1080p 或更高、16:9、英文主字幕；字幕需人工逐句校对。

9. 最终验收清单

内容

- ☐ 开头说明 FMS 是七动作、0–3 ordinal movement screen，不是 diagnosis。
- ☐ 清楚展示 Ronnie 的 FMS Level 1 和 Level 2 certificates。
- ☐ 展示 certification 后的实际 FMS 评估/复核经历，并自然引出项目问题。
- ☐ 中间主体覆盖七动作产品、四动作 Phase I、blind review 和 secondary findings。
- ☐ 结尾说明 Ronnie 的具体角色、反思、收获和大学后的研究方向。
- ☐ 全程由 Ronnie 旁白，开头和结尾本人出镜。

事实与边界

- ☐ 证书名称、级别、姓名和日期与原件完全一致。
- ☐ 不把 certification 表述为 clinician、medical expert 或项目 scientific validation。
- ☐ 不使用 medical diagnosis、injury prediction、expert replacement 或 accuracy overclaim。
- ☐ 110 表示 repetitions，不是 participants。
- ☐ AI 结果称为 internal benchmark，不称 held-out 或 clinical validation。
- ☐ Ronnie、Other Reviewer、成人贡献者和 Codex 的角色表述符合事实。

画面与隐私

- ☐ 所有证书、FMS 实践和动作视频完成 rights/consent 检查。
- ☐ 遮挡 certificate number、QR code、email、住址和不必要 identifier。
- ☐ Workbench 使用真实视频与真实 pose，不使用黑色占位或 demo skeleton。
- ☐ Study Mode 不含 AI、pose、历史分数、文件名或另一 reviewer 答案。
- ☐ 不出现本地路径、浏览器通知、private reviewer comments 或 score-bearing filename。

技术质量

- ☐ Master 时长 4:15–4:30；三分钟版和 60 秒版从同一母版输出。
- ☐ 1080p 或更高，16:9，画面无卡顿、错位 skeleton 或不可读文字。
- ☐ 人声清楚、响度一致，背景音乐不遮挡 narration。
- ☐ 英文字幕与旁白一致，FMS、MediaPipe 和 human-in-the-loop 拼写统一。
- ☐ End card 只显示最终有效链接。

10. 输出文件

- Master: `ai-fms-application-film-4m30.mp4`
- English subtitles: `ai-fms-application-film-4m30.en.srt`
- 3-minute cut: `ai-fms-application-film-3min.mp4`
- 60-second cut: `ai-fms-application-film-60s.mp4`
- Approved certificate images: 存入 private production folder，不直接放入 public Git repository。
- Rights/consent log: 随 private delivery archive 保存。

11. FMS 介绍依据

正式旁白采用保守定义：FMS 使用七个 fundamental movement patterns 观察 movement quality，并按 0–3 ordinal scale 评分；它是 movement screen，不是 orthopedic diagnosis。
